### Oops, we goofed...!?

From time to time there may be an error, typo and/or change to information in the program guide. If so, we will take every step to correct the situation in a timely and efficient manner. We appreciate your patience and understanding should these situations arise.

### Municipal Complex Construction Update

If you've been by the Doylestown Township complex lately, then you know construction is well underway! The old township building has been torn down, and the Board of Supervisors officially broke ground in March for a brand new Administration/Police building.

Township Administration and Police are now fully operating within modular units situated on the basketball courts in Central Park. It is the intention of the Township that business will go on with as little disruption to services as possible.

### New Program Location

All indoor Parks and Recreation programs continue to be held in the Meeting and Activity Center Trailer (pictured above) which is located adjacent to the Administration Trailer in Central Park (425 Wells Rd.). In order to get to the trailer, you must enter Central Park off of Wells Road and make an immediate right into the parking lot. Please take note of the program location when registering!

## Please Register Early!

Nothing ruins a good program like waiting until the last minute to register.

If a program does not have sufficient registration five working days prior to the start date it may be cancelled.

Let us know! We're always looking for new instructors and program ideas. Download our Program Proposal Form at [www.doylestownrec.com](http://www.doylestownrec.com) or give us a call at 215-348-9915 for more information.

Robots are generally used to perform either dangerous or monotonous tasks. The challenge facing robotics engineers is

that the robot knows only what is written into the program. The design of the robot must also be capable of performing the task at hand. Mission Mars curriculum is designed to introduce students to the world of not only building, but also programming basic robots. Throughout this course the students will explore different ways in which a robot could be utilized to explore a distant planet.
